SKILLS

- **Programming Languages:** Python, C, Java, SQL (foundational)
- **Other:** GitHub, CLion, VS Code, PyCharm, REST APIs, Pandas, JSON, Relational Database Design (foundational)

EDUCATION

Bachelor of Computer Science, Honours Applied Computing Co-op September 2024 - Present

- Major Average: 82%
- Courses: System Programming, Object-oriented programming using Java, Data Structures and Algorithms, Software Development, Advanced Object Oriented System Design Using C++, Computer Architecture 1 & 2

WORK EXPERIENCE

UCMAS Mental Math School Instructor May 2022 - July 2024

- Instructed over 20 students aged 6-14 in mental math using the abacus calculator for over 2 years, strengthening initiative and problem-solving skills.

PROJECTS

DocuVault: A Document Processing Application in Python July 2026 - August 2026

- Developed a document processing application using IBM Docling library in Python, that converts source documents of different types into structured content for search and review
- Investigated OCR and different document types' parsing edge cases by testing the quality of results for different documents to improve backend coding decisions
- Prototyped a reliable UI using Flet for document ingestion to allow for an intuitive user experience

Messenger Application: An Intuitive and Secure Messaging Application in Java January 2026 - April 2026

- Collaborated in a 4-student team to architect a client-server messaging application, evaluating the design and frameworks needed for each part of the project
- Engineered the application flow by designing the pseudocode for client-server interactions, creating an organized blueprint for reference
- Implemented WebSocket connection and communication logic in code using the Javalin framework to support real-time messaging
- Co-presented the deployed application and its technical design with teammates to the class, receiving a 100% final project grade.

Stock Trading News Alert Application in Python December 2025

- Built a Python-based data-processing workflow that retrieved and analyzed Tesla stock data through the Alpha Vantage REST API, detecting significant day-over-day price changes to support automated event-driven alerts.
- Developed an automated SMS notification feature using Twilio and NewsAPI, filtering articles by keyword and publication date to deliver concise, context-aware updates.

- Parsed and transformed JSON responses from multiple external APIs into structured data, enabling reliable analysis and message-generation workflows.
- Debugged API requests, response handling, and data-processing issues, improving the reliability of an integrated multi-service automation application.
